Because Right Now Matters Most To YOU!

Life and Safety

The life safety of all individuals, whether they are residents, guests, or employees, is of utmost importance to any organization.

Numerous devices such as mobile pendants, panic buttons, or pull cords, initiate an alarm when someone is in need of immediate attention. Unified Alerting (SARA) improves life safety by turning multiple alarming systems into a single managed alerting solution allowing for more efficient processes and faster response times.

Wireless Emergency Call and Wander Management

Through a simple to use text to voice engine, alerts can be sent via voice and text alerts to in-building pagers, email and telephones, as well as to cell phones, home phones and external email. This allows both staff and residents to be notified of important events at any time, any place.

- Mobile Pendants (Personal Emergency Response)
- Pull Cords (Wired and Wireless)
- Bed/ Chair Sensors
- Specialty Call Cords (air activated, light touch)
- Wander Prevention Sensors

Panic and Duress

Wireless panic/duress systems alert security personnel and your employees to threatening situations that may be developing.

- Fixed Panic Buttons
- Mobile Pendants

Mass Notification

Having the ability to notify large groups of people in disperse areas in an effective and efficient manner via multiple means of communication could save lives.

- Pagers
- Email
- Cell Phones
- Phone System
- CCTV
- LED Wall Boards
- Hands Free Intercom phone

Resident Broadcast Communication

Alerts for community events, security alerts, scheduled activities, bus departure and medicine reminders can be scheduled and automatically sent via phone to designated residents and/ or staff members. The technology uses a “text-to-voice” capability which is integrated with the phone system.

Regularly scheduled, recurring events can be entered into the system, or “Quick Messages” can be created. Quick Messages are an effective tool for last minute schedule changes or safety related information, such as inclement weather.

Long Range Wireless

With our long range wireless communication solution your staff can receive all alerts and communicate with each other over one wireless phone/device.

Unified Communications

Imagine all your communications working together. Imagine fast, seamless collaboration with employees and residents.

Unified Communications Brings Together

- Traditional Phones
- VOIP Phones
- Soft Phones
- Mobile Phones
- Conferencing (Voice and Video)
- Email
- Instant Messaging
- Remote Offices and Workers
- Remote Access Solutions

Security and Environmental

Unified Alerting helps mitigate risk to your residents and your property by keeping you aware of all security and environmental related issues. Sensors can be placed throughout your facility to detect security and environmental concerns, but it is the alerting engine that can then notify the appropriate individuals that a monitored event is occurring 24x7 before it becomes a major concern or inventory loss.

Security Sensors

- Door/ Window Sensors
- Motion Detectors
- Glass Break Detectors
- Cigarette Busters
- Video Cameras
- Fire Panel Integration

Environmental Monitoring Sensors

- Equipment Monitors
- Freezer/ Temperature Monitors
- Smoke/ Flame Detectors
- Moisture/ Humidity Detectors
- Cigarette Busters

Long Term Care Solutions

Many senior living communities have benefited from installing our Unified Alerting solution. While the benefits from the system are similar, the reason for choosing this flexible type of technology varies based upon the individual community's needs.

Life and Safety

The life safety of all individuals, whether they are residents, guests, or employees, is of utmost importance to any organization. Numerous devices such as mobile pendants, panic buttons, or pull cords, initiate an alarm when someone is in need of immediate attention. Unified Alerting (SARA) improves life safety by turning multiple alarming systems into a single managed alerting solution allowing for more efficient processes and faster response times.

Resident Broadcast Communication

Unified Alerting increases awareness, mobility and safety by providing an automated means of communicating both emergency and non-emergency alerts, activities and events. Having the ability to notify large groups of people in disperse areas in an effective and efficient manner via multiple means of communication could save lives.

Security Environmental Issues

You work hard to ensure that a safe and comfortable environment is in place for your residents and staff. You have devices in place to regulate temperature levels and to detect the presence of smoke, flame, motion or moisture. If any of these devices sense a sudden change or a system such as a heat pump or refrigeration unit experiences a failure, staff must be alerted in order to address the issue before it becomes a major concern or even an emergency situation. With Unified Alerting your staff can be notified of these events 24x7.

Unified Alerts

Because RIGHT NOW Matters Most!

Unified Alerting enables a unified awareness approach by leveraging current communication tools like email, voice, web and wireless, to keep people aware and make them more productive in servicing your residents.

Our solution takes a wider view of the facility's true needs by providing a solution that addresses life safety, security and environmental conditions affecting the facility, as well as the need for mass notification or communication of both emergencies and non-emergencies to residents and staff.

Regardless of your situation, your need to achieve unified awareness can be met.

Our single **"Unified Alert Solution"** can provide your community with:

- Nurse Call (Wireless)
- Integration to Existing Nurse Call
- Resident Wander Prevention
- Advanced Resident Check-in
- Personal Emergency Response (PERS) for residents
- Resident Reminders and Notifications
- Emergency Mass Notifications
- Environmental and Security Monitoring
- Fire Panel Integration

Combining this with our long range wireless communications, your staff can receive all alerts and communicate with each other throughout the entire campus with one wireless phone/device.

**With Unified Alerting YOU receive the alerts
Wherever you are and When you need to.**
